1681. 8

Apollo Anglicanus,

THE

ENGLISH APOLLO:

Assisting

All Persons in the right Understanding of this Years Revolution, as also of things past, present, and to come,

With necessary Tables plain and useful, A twofold Kalendar, *viz. Julian* or *English*, *Gregorian* or *Foreign* Computations, more plain and full than any other; with the Sun and Moons Risings and Settings daily observ'd, with that Accuracy that will rarely be found in most other Almanacks.

Being the First after Bissextile, *or Leap Year.*

With a necessary and useful discourse of the YEAR.

By RICHARD SAUNDERS
Student in the Physical- Cœlestial Sciences.

Astra regunt corpus, mens libera fidera vincit,
Est Deus in cœlis, hunc cole, tutus eris.

Cum Privilegio.

LONDON,
Printed for the Company of Stationers, 1681.

A Table ſhewing how many years Purchaſe a Leaſe or Annuity, to endure for any Term of years under 33. is worth preſently at Intereſt upon Intereſt, at ſix in the hundred: and ſhewing plainly how to diſcount any Leaſe in Being, and the true value of the Reverſion after any number of years.

years of a Leaſe.	Years.	Months.	dec. par.

The Uſe and Explanation of this Table.

The firſt Column towards the left hand, ſheweth the yeares of a Leaſe or Annuity, and right againſt each Year, is the Years, Months, and Decimal Parts of a Months purchaſe, that ſuch a Leaſe or Annuity is worth.

Example.

Suppoſe a Leaſe or Annuity to continue ten Years, and you would know how many years purchaſe it is worth in preſent money, look in the Table for ten years of a Leaſe to the left hand, and againſt the ſame you ſhall find 7, 4, 3, which ſheweth ſuch a Leaſe to be worth ſeven years four months, and three tenth parts of a months purchaſe.

years of a Leaſe.	Years.	Months.	dec. par.
17	10	5	8
18	10	9	9
19	11	1	3
20	11	5	7
21	11	9	3
22	12	0	5
23	12	3	6
24	12	6	6
25	12	9	4
26	13	0	0
27	13	2	5
28	13	4	9
29	13	7	1
30	13	9	2
31	13	11	1
32	14	1	0

Again, you are to take or buy the Reverſion of any Leaſe or Annuity, work thus, Suppoſe the Leaſe to be thirty years in all, you find in the ſecond Table and right hand againſt thirty, 13 years, nine months, and two tenth parts of a months purchaſe: this it were worth, were it in preſent poſſeſſion. But ſuppoſe there be a Leaſe of five years (more or leſs) before your Commence: look in the Table againſt the five years, and there you find four Years, two Moneths, five tenth parts, half a Moneths purchaſe: take this out of the ſum againſt thirty, which is 13, 9, 2. 4, 2, 5. The remainder is 9 years ſix moneths, ſeven tenth parts of a moneth: and ſo much is the Reverſion after five years worth, the remainder of thirty years. This is uſeful and very eaſie.

A Table of the Kings and Queens of *England* since the Conquest.

Kings and Queens names.	Born Anno	*Began to reign.*	Reigned Y.	M	Since their Reigns ended.	Buried at

Charles 2	1630	1748, Jan. 30	Whom God grant long to live.			

The World must now confess, that Monarchs are
Of him that rules above the chiefest Care.
He with great CHARLES doth gently restore.
Heaven could not give us, nor cou'd we Here more.
Hence Anti-Monarchists, from you there springs
Slavery; but Freedom is from Heaven and Kings.
Then let all loyal hearts with us conclude,
May Cæsar live, and Rebels be subdu'd.

A perfect Table of the four Terms, and their Returns, with the Essoyn Dayes, Dayes of Exception, Returna brevium, and days of Appearance this year, 1681.

Hillary Term begins *Jan.* 23. ends *Feb.* 12.

Directions for the subsequent Diary, or Almanack.

1. IN the first Column to the left hand, on the left hand Page, you have the numeral figures of the days of the Moneth.

2. In the second Column you have the Week days, and Dominical Letter. 3. You have all the principal and observable Saints days and others. the places of the Planets and the *Moon*. and what fixed Stars she is with, is observed: by which the Asterisms and Constellations are easily known to an ingenious eye and understanding.

4. The Moons place in the Zodiack every day at noon.

5. The age of the Moon by which the Tides are known.

6. The rising and setting of the Moon every day in the year, with Latitude. 7. The general state of the weather, with much care performed by the Author.

8. In the 8 column, the first on the right hand, you have the English account. In the 9 the foreign. In the 10 the Roman Week days, and Sunday Letter.

11. The perfect Roman Kalendar and Saints days.

12. 13. 14. the utmost to the right hand you have the daily rising and setting of the Sun with the Aspects.

A Table to find when the Moon will be full South every day this year, whereby the time of Tides is exactly known.

D.		H.	M.

First, find her age in the 5. column of the Almanack, which is truly every day noted: which age seek out in one of the two columns of this Table to the left hand, against which in the 3 and 4 columns is the hours and minutes which shew the time of the moons being South.

Example, The 22 day of *March* the moon is 12 days old, which being found in the first column of this Table to the left hand, it points to 9*h*. 36 *min*. at which time the moon is South the said 22 day of *March* 1681. *Et sic de cæteris.*

Note: that all the increase she cometh to the South in the evening following the Sun: but in the decrease, in the morn. going before the Sun.

By any Sun-dial you may know the hour of the night, by adding to the time of the moon being South after, or subtracting before it.

To find the time of High Water in moſt Coaſts of England.

Firſt, as you before were taught, find at what time the Moon will be South, for then you may truly conclude that it is High water at *Southampton*, *Quinborough*, and *Portſmouth*, for there the South and North Moons make High-Waters. But when you deſire the time of Full Sea in any of the following Coaſts in the enſuing Table, find the name of the place, and ſee how many hours and minutes be annexed thereunto, in the Column under *H. M.* which added to the time of the Moons coming to the South, gives you the time of High-water for the place required.

A Tide Table with the Names of the Havens.

Rocheſter, Maldon, Aberdeen,	0 *h.*	45 *m.*
Graveſend, Romney, Ramkins,	1	30
London, Tinmouth, Hartlepool,	3	0
Frith, Leith, Dunbar, Narbon,	4	30
Newcaſtle, Falmouth, Humber,	5	15
Lyn, Antwerp, Plymouth, Hull,	6	0
Briſtol, Lanion, Foulneſs,	6	45
Milford, Bridgewater, North-coaſt,	7	30
Portland, Peterport, Hartflew,	8	15
Dover, Yarmouth, Harwich, Dublin,	10	30
Callice, Rie, Winchelſey, Calſhot.	11	55

Example.

The 22 of March this year it is required to know the time of Full Sea at *London*: by the Kalendar over againſt the 22 of March in the fifth Column, I find the Moon 12 days old, and by the foregoing Southing Table, I find the Moon at South 9 *hours*. 36 *minutes* in the afternoon: then in the preceeding Table, againſt *London*, I find 3 *hours* 0 *min.* which being added to 9 *ho.* 39 *min.* the aggregate is 22 *ho.* 36 *min.* wherefore I conclude it High-water there 36 *minut.* paſt Midnight: the like in any others.

Note. That the Tide floweth one point of the Compaſs, more at the Spring-Tide (which is the New and Full Moons) than at the Neap-Tides (the firſt and ſecond Quarters) As alſo the Latitude of the Moon and Winds may alter it an hour ſooner or later: let it be their prudence who depend on the Tides to make timely proviſion.

The Tides, like timeous Humors, never reſt,
Still conſtant in inconſtancy at beſt.

A Chronology of things Memorable to this Year. 1681.

The Anatomy of Mans Body, as the parts there are Governed by the Twelve Celestial Signs

SAUNDERS 1681.

Of the Eclipſes this preſent Year.

FOur times this year will the Inhabitants of this Earthly Globe be deprived of the light of the *Luminaries* from their ſight, *viz.* there will be two Eclipſes of the Sun, and as many of the Moon, thoſe of the Sun happen as followeth:

The firſt of the Sun happens on *March* the 10 about one of the Clock in the morning, therefore not perceived by us in this *Northern Hemiſphere*, it will be celebrated in the beginning of our *Engliſh Horoſcope*, the Sign *Aries*, but will be moſt viſible (according to the rules of *Aſtronomy*) to thoſe that inhabit our *Antipodes*. Authors tell us that an Eclipſe of the Sun in the fiery *Trigon*, foreſhews many Exhalations and ſtrange fiery Meteors in the air, Thunder, Lightnings, Coruſcations, exceſſive Heats and droughts, with deſtruction of four-footed Beaſts, Baniſhment, Impriſonment, or depoſing of Great Perſons, many diſcords between the People and their Ruler, War and ſlaughter of Mankind, Ruins, Depopulations, Thefts, Famine, by reaſon of the great deſolations,

Burning of Houſes, Towns and Cities, univerſal Maſſacres, &c. with many ſtrange diſeaſes, as burning and peſtilential Feavers, and if the Eclipſe happens in *Aries*, as this, then it affects the ſick, even unto Madneſs, with little hopes of recovery, *viz.* with the Lethargie, Frenzy, Vertigo, Apoplexy, Falling-ſickneſs, Convulſions, &c. For as *Aries* ſignifies the Head, theſe are the diſeaſes appropriated thereto, from hence may aſtrologically be conjectured diſeaſes of the head to appear moſt under the influence of this Eclipſe, and this in *England*, as well as in other parts of *Europe*.

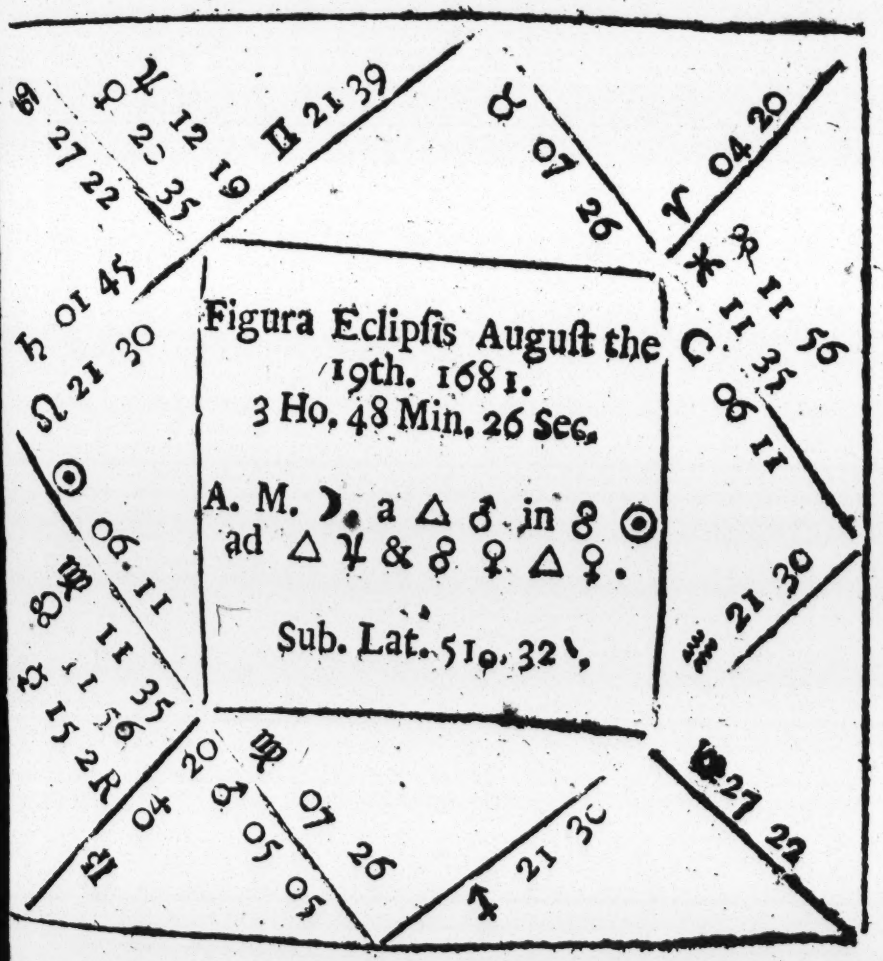
Eclipſes *Luminarium ſuper Civitates, Provincia*, &c. *Regna magis quam ſuper privatæ conditionis homines aut enim ſuper Reges reſpiciunt enim multitudinem*, Cardon. Seg. 5. *Aphor.* 45.

The Second Eclipſe of the Sun will be (if the frame of Natures not prohibited) the ſecond of *September*, near the twentieth degree of the Sign *Virgo*, the aſcendant of *France*, about three a clock in the morning: this Eclipſe will be inconſpicuous as to us, and but a ſmall defect where its moſt viſible. Its the Opinion of the Learned, that the Sun is at no time Eclipſed in vain, but the forerunner of prejudice attending: nor indeed, need we retroſpect paſt times concerning what our Predeceſſors have writ as to the effects of Eclipſes, for we have had large examples of the ſame in our age, eſpecially in *England*, after the Eclipſes of the Sun in *Aries*. Authors conclude likewiſe, that the Eclipſe of the Sun, falling in an Earthly Sign, denotes deſtruction to the fruits of the Earth, Famine, and danger of a raging Peſtilence therefrom, extream Clouds, Froſts and foggy weather, with many unwholeſome Airs, Conſumptive, deadly and tedious melancholy diſeaſes.

The Firſt Eclipſe of the Moon is Celebrated in the

fourteenth degree, thirty four minutes, fifty seven seconds of the Celestial Sign *Virgo*, which, although the Eclipse will be invisible unto us, yet the Moon suffers above eight parts of her body darkned, it happens *February* 22, 46 min. 10 seconds past 9 a clock in the morning, middle time, 7 min. 48 sec. after 11, and ends 34 min. 14 sec. past noon. Duration 3 ho. 58 min. 4 digits. Eclipsed 8 hours 21 min.

The Figure of the Eclipse.



Astrology (saith a learned Author) as well as *Physick*, is but a certain bundle of Experience heaped up from Age to Age, by the industrious Observations of our Predecessors, and bequeathed from them as a portion or Legacy to Posterity.

Its through experience the Souldier becomes Politick, the Artificer so skilful, and indeed it is Experience that makes any Science perfect, seeing then Experience prevails so much in any thing wherein Humanity's concerned, its not beside the Bridge to observe that there is a certain sympathy and antipathy amongst the Twelve Signs of the *Zodiack*, all which have been observed by manifest Experience, and accurate Observations agreeing or disagreeing with certain Kingdoms, Cities, *&c.*

Insomuch, that our fore-Fathers have marked any notable events happening in any such places, as the irruptions of People, devastations of Countries, Earthquakes, Pestilence, Famine, scarcity of Victuals, unaccustomed tempestuous winds, inundation of Floods and Rivers, with many other such Casualties which they carefully observed to have succeeded in a little space of time after any great Eclipses, especially those of the Sun, or any eminent Conjunctions, or other grand Configurations of the Superiour Planets, I say, from hence it is Astrologers are made capable to prognosticate the most significant mutations and calamities, happening to most of the known parts of the World, and by such Observations they have certainly found out the Signs whereunto they have been subject, *viz.* their true Horoscopical Signs whose quadrangle have been sensible of the effects succeeding any such eminent Configurations, and this from the agreeing or disagreeing in qualitys of the Signs either active or passive.

The

The Glorious and Omnipotent God in the Works of his Creation, ordained and constituted the Course of Nature, created and made all things in number, weight and measure, and did not only so, but hath reserved to this moment, the same power in his own hands, and will, without question, *ad infinitum mundi*, and is as able now to annihilate, as he was to create then, and bring all things created, to its old *nothing*.

In the number of his creating all things, the Sun, Moon and Stars were some, the which to behold is so wonderful, and declaring so infinite his Omnipotence, that no rational man can deny but that they were made for more than to be gazed on, or to give light only: the holy Scriptures saith they were made *for Signs and for Seasons*, and God gave them a constant motion to be still the same, and as he gave them motion, he endued man (the Image of his own Person) with reason to comprehend it, and to measure out Times and Seasons thereby; for by the two greater Lights, man's able (*infinitus amor*) to measure both our Days and Years by motion, for indeed, did but God frustrate from the World, the light of the Sun, Moon and Stars, what a *nonplus* would man be at, as not being able to comprehend, or know, what, where or when, *obiter*, but now to our Ecliptick Scheme: wherein we are to observe the Luminary Eclipsed, the Sign it happens in the Mansion of Heaven, the planets beholding the defect, the quantity of *digits* Eclipsed, the Planet or Planets that are Lords thereof, the persons passive to its operation, together with the Kingdoms or Countries, &c.

First, it is the Moon that suffers the defect, and she's generally accounted the Significatrix of all common people, or the vulgar men, Fishermen,

Sea-

Seamen, Watermen, Fiſhmongers, and men of all manner of Imployments upon the Waters, Midwives, Nurſes, Oylmen, Vintners, Tapſters, Victuallers, &c. Theſe are the perſons ſignified by this Eclipſe, that will undergo great detriment in their publick Affairs, many contentions, vexations, and ſtrange animoſities to follow, for the Eclipſe it ſelf is great, and begins with the houſe of Death, and ends in the Seventh, the houſe of ſtrife and quarrels, ſo that it may be Aſtrologically conjectured that the effects of this Eclipſe will operate chiefly, in the end, in contentions, or many miſchiefs to follow by its falling in the ſeventh, which hath genuinely ſignification of Controverſies, Wars, change or mutation of Laws, Cuſtoms, law-ſuits, partnerſhips, quarrels, wranglings, murthers, bloodſhed and ſlaughter of mankind, this Houſe hath alſo ſignifications of mariages, therefore the misfortunes before mentioned the Inhabitants of ſeveral Nations are to be afflicted with: and thoſe are eſpecially under the Signs *Piſces*, *Virgo*, *Sagitary* and *Gemini*, which are of Cities, Countries, &c. *Normandy*, *Portugal*, *Galatia*, *Lydia*, *Pamphilia*, *Alexandria*, *Compoſtella*, *Remes*, *Wormes*, *Spain*, *Dalmatia*, *Hungary*, *Slavonia*, *Toledo*, *Narbon*, *Rhodes*, *Hieruſalem*, *Achaia*, *Greece*, *Creet*, *Carinthia*, the Dukedome of *Athens*, *Babylon*, part of *Rhyne*, *Thoulouſe*, *Lyons*, *Paris*, *Sardinia*, *Bruges* in *Flanders*, *London*, *South* and *Weſt* parts of *England*, *Brabant*, the Dukedome of *Wittenberge*, &c.

This Eclipſe does not only denote death to many, and what is prementioned, but it alſo ſignifies many debates in and about Religion, as likewiſe many unfortunate and unlucky marriages, for it happens in the firſt face of *Piſces*, which is the preſager of much ſorrow and many wranglings and janglings to baſe Prieſts, Biſhops and other Eccleſiaſtical Officers,

cers, and as it happens in *Pisces*, a Sign of the Watry *Trigon*, it denotes and confirms what's aforesaid, many storms, troubles and Tempest at Sea, great inundations and overflowing of the Sea-banks, foggy, misty, cloudy, dark weather, it also signifies destruction of Fish and Fowl, and so a death and scarcity of them, and great mortality among the common people, tumults and many seditions, and is really the fore-runner of many mischiefs happening to *England*, as the breach of Leagues and Articles, much treachery, and sundry vexations from private adversaries, with imprisonment: and a death amongst the greater sort of Cattel, as Oxen, Horses, Cows, *&c.* and this in the *West* and *North-west* parts of *England*.

From consideration of the sign in which the defect happens, Astrologers are made able to judge what particuiar persons are most passive to the effects of any Eclipse, and is done by observing whose radical Ascendant *Mid*-Heaven, places of the Sun, *Moon* and part of Fortune: which persons that are to be the sufferers in the influence of this Eclipse, are such as have their aforesaid points in the first 10 degrees of ♓ ♍ ♐ or ♊. I say, those are the persons that shall signially tast of their evil influences which operates chiefly on their Bodys, bringing many hard, difficult, and almost incureable diseases, therefore those concerned, let them beware; but its probable much of those Judgments will be abated by reason the benevolent *Planet Venus* is Lady of the defect, with whom *Jupiter* lends his exalted influence.

The duration of this Eclipse is 3 hours, which, according to *Astrologers*, the effects will be in force so many months, and if we credit the Opinion of *Origanus*, the effects will begin immediately after the day of the defect, but others say, *Corpora cœlestia non agunt in instanti, sed cum tempore*: The Cœlestial Bodys

operate

operate not immediately, but with same delay: which is very rational, to which *Mr. Wing* and many others cohere, therefore the effects of this Eclipse, according to *Wing*, begins not until 344 days be expired, which will be about the latter end of *July*, 1682, (but for my part, I dare be certain the effects begins much sooner) and all, as it were, preparing matter for the Great Conjunction succeeding in the month of *October*, of the two Superiors, *Saturn* and *Jupiter*, in the fixed, Regal Sign *Leo*, the Ascendant of *Rome*, for whosoever liveth but some few years will certainly hear of strange *Catastrophes* and *Overtures* in many parts of the World, subsequent to that grand Celestial Congress, so that they cannot congratulate at their good Fortune.

Yea, through so many cross Configurations happening in *Leo*, the aforesaid *Horoscope*, may perchance, enforce his Holiness to forsake his Triple Crown, certainly, if ever Nation, City, Country or People were menaced by the Stars of Heaven, to have any troubles or calamities befal them, those under *Leo* are designed sufferers, and more especially *Rome* it self, for the two ponderous *Planets Saturn* and *Jupiter* are not satisfied in meeting once in *Leo* 1682, but before the year 1683 is expired, they meet again and again, together with the coadunation of so many of the Celestial Wanderers in that fiery Sign, and especially of *Mars* his peragration through the same, may give just cause to the *Agrologian* for the predicting the appearance, either of some Comet, strange Apparitions, or some blazing, prodigious, igneous *Meteors* in the Air, which if not there will be (unless God withdraw what's signified) strange Commotions, Wars, Fires, with great Tumults and Uproars in several Nations of *Europe*, Countries and Kingdoms, which is farther confirmed by the square of

the

the two Maleficks, *Saturn* and *Mars*, from fixed Signes in the Ecliptical Scheme, whoſe influence will doubtleſs ſtir up many inſurrections, if not the effuſion of bloud, ſome ſpeak leſs religious then formerly, yet much of this ſhall ariſe thereby, with a ſtrange kind of Government in divers places. However we have *Venus* Lady of the Houſe of Sovereignty, juſt entring her own Terms, lately ſeparated from the body of exalted *Jupiter*, and having no affliction, but in a Sign of her own nature, denotes His Majeſty to be in a ſafe and proſperous condition, (which I pray God continue to his Lives end) notwithſtanding the malice and cunning Stratagems of his enemies.

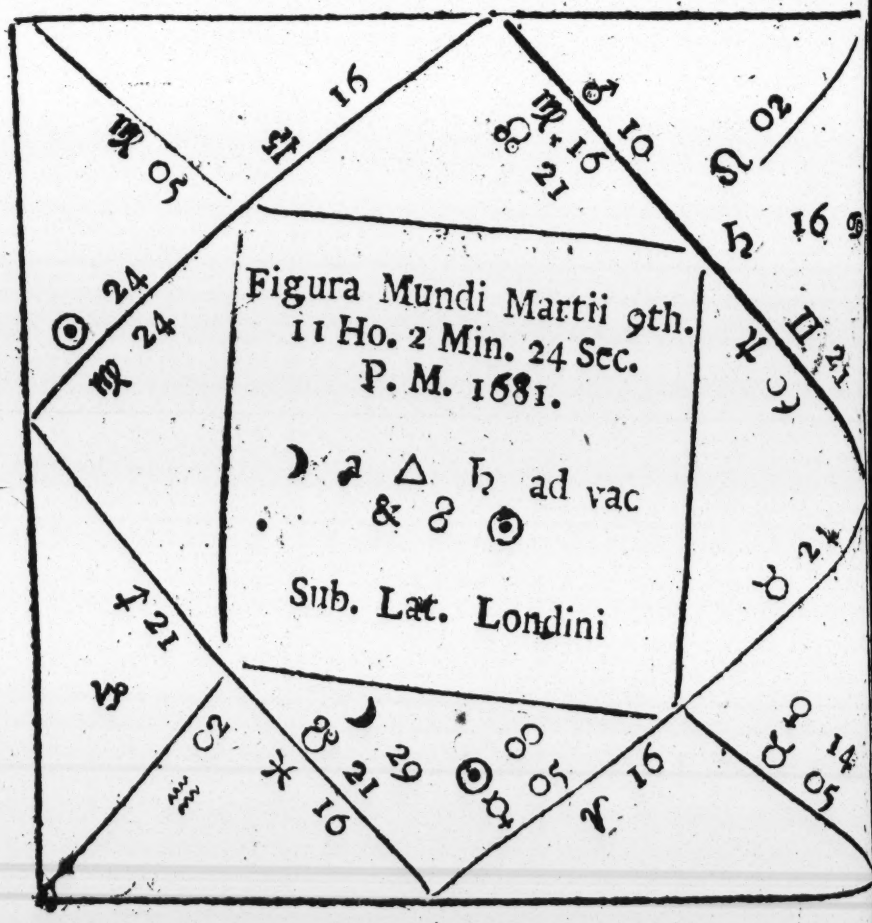
Of the four Quarters of the Tear,

Firſt of the Spring.

WHich this Year takes its beginning *March* 9, 2 min. 24 ſec. paſt 11 at night, *M.T.* according to the *Caroline* Tables, whlch this Year I follow: Now the Sun enters the firſt ſcruple of *Aries*, equallizing day and night all the World over (except under the Poles.) The natural conſtitution of this Quarter is generally hot and moiſt, which, if it prove otherwiſe, it bringeth many ſudden, ſtrange diſeaſes, and noxious diſtempers, for generation conſiſteth wholly in heat and moiſture, therefore ſuch perſons as are naturally melancholy, enjoy their health this Quarter. The ſanguine the contrary, age is vivacious and lively, youth and childhood inclinable to many diſtempers, thoſe being moſt dangerous which proceed from putrified and corrupted bloud.

And here I cannot forget my old caution which by all people ought to be uſed, for now the Pores of the body open by the increaſing heat, and by reaſon of froſty mornings and cold evenings, they may quickly prejudice their health for want of heedful keeping warm, many noxious diſtempers (through cold) invade our bodies, and thoſe diſtempers taken by cold in the Spring corrupt the bloud and obſtruct its circulation, which is the cauſe of many various differing diſeaſes, according to the conſtitution of the body.

The Scheme of the Suns Ingreſs follows.



In this our Vernal Figure we have an indifferent mild, calm posture of Heaven, the gentle Planet *Venus* is most essentially strong in *Sextile* to *Saturn*, and in time with *Mars* the two infortunes in *Sextile* to each other, *Mars* and *Mercury* in strong reception, the Moon separates from the Trine of *Saturn* and applys to the conjunction of the Sun. *Mercurys* in Sextile with *Jupiter*, from whence may probably be gathered that the Kingdom of *England* during the first half year especially, will be carried on with peace and union, and live free from the molestation of any foreign adversary, *non obstinate*, the suggestions of thousands, and will, I hope, through the influence of so many good Aspects, have good Trading and Commerce.

The most significant Configuration in the Scheme is between *Mars* and *Jupiter*, the one being Lord of the third from the tenth, and the other of the fifth ------ *Verbum sat.* Its the true Astrologian that knows the *English*, *parum intelligo*, *sed nihil dico*, *quoniam interdictum est.*

Of Summer.

WHich this Year begins (in the Latitude of *London*) *June* 10 13 min. past 11 at night, at which time the 19 degree of *Sagitary* culminates, and the 2 degree of the Celestial Sign *Pisces* ascends our Horizon, the Moon separates from the *Sextile* of the Sun, and applys to the *Sextile* of *Venus*, and then to the Square of *Mercury*, afterwards to the *Sextile* of *Saturn*, Conjunction of *Mars*, and to the Square of *Jupiter*, *Mars* in the Angle of Contention is in Square to both *Jupiter* and *Mercury* in the fourth.

In

In truth its no very pleasing position, matters of the Publick Concern stand much more dubious than at the Vernal Ingress, and the minds of men possessed with many fears and jealousies of what may approach, ---- 1682 & 1683 are not come. The natural constitution of this quarter is hot and dry, simulating Manhood and Choler, the Phlegmatick are at this time best at ease, the Cholerick otherwise, Old Age reviveth, and Youth languisheth.

Of Autumn.

THis Quarter begins the Sun entring the *Equator* in *Libra*, *September* 12, 42 min. past 1 in the afternoon, making the Day and Night again equal, this Season is by nature cold and dry, and agreeth with melancholy resembling Age. The Sanguine Constitution is now most lively, the melancholy most afflicted, best time for youth, and the worst time in the year for Age.

At this Autumnal Ingress the 28 degree of *Libra* is on the Mid-Heaven, the 24 degree of *Sagitary* ascends the *Eastern finiter*. *Mars* is strong in the eleventh in *Trine* to both the Fortunes, and three of the Seven Planets essentially dignifyd, the Moons in *Trine* with *Sol*, and in *Opposition* to *Saturn*, *cum multis aliis*: a more serene position than the last, and will rectifie what the other made amiss both at home and abroad, to be short, it is an harmonious position.

Of Winter.

WHich this year takes beginning *December* 11, 7 min. after 3 in the morning, the Sun then entring the first scruple of *Capricorn*. This Quarter is generally cold and moist in the beginning, its more cold than moist, amongst the Humors Flegm is most predominant, old and flegmatick persons are now most distempered, the Cholerick best in health, age is most infirm, and youth most healthful, at this Ingress the 3 deg. of *Scorpio* ascends and *Leo* culminates the Moon in her exaltation, but in Square to *Saturn*, *Mars* separates from the *Opposition* of *Jupiter*, and applies to the *Opposition* of *Saturn*, which is of no good consequence.

A short Discourse of the Year.

COncerning the beginning, continuance and ending of the year, there are almost as many several reckonings as there are sundry Nations, which at present I shall pass by, and take my Epoche from *Julius Cæsar*, who in his time, observing the great inequality between the Leap-year and the Common-year, as also the great confusion and disorder of each in particular, did then consider which way he might reconcile those differences, and bring the year to a more certain and nearer equality (and after much pain and long study and many consultations had with the *Grecians* and others) at last (by the advice and help of the famous *Sosigines*) reduced the year into the form

form which it ſtill keeps, and we now uſe, *viz.* 365 days 6 hours: Now *Julius Cæſar* conſidered alſo, that it was no eaſy matter to reckon theſe ſix hours every year, for if ſo, it would come to paſs, that if the firſt year began in the morning, the next would begin at noon, and the next at night, ſo that we ſhould drive the beginning of the year every four years a day farther, without the getting of a day, ſo that in 124 years, our *Lady* would fall upon, or near that day upon which the Feaſt of *St. Mark Evangeliſt* is now celebrated: to avoid which inconvenience, he order'd, that the ſix hours of the firſt, ſecond and third year ſhould be reſerved to the ſix hours of the fourth year, and the whole day conſiſting of four times ſix hours, ſhould every fourth year be added to the Month of *February*, in regard, 'tis the ſhorteſt of the twelve, and this day he put next after the 24 of *February*, and being thus inſerted between the 24 and 25 of that moneth, it is called *Dies inter calaris*, and the year in which this Intercalation happeneth is called *Annus intercalaris*, or *Biſſextilis*, and the reaſon why 'tis ſo called, is this: The ſix *Kalends* of *March* (according to the *Roman* account) fell always upon the 24 day of *February*, to which day the Letter F. belongeth, now by reaſon of the interpoſition of this day, the ſixth *Kalends* of *March*, and alſo the Letter F. belonging thereunto, is again repeated, and therefore 'tis called *Annus Biſſextilis*: and the Letter F. ſerving to the 24 day of *February*, being twice repeated, St. *Matthias* day is then obſerved upon the Leter F. or the 25 day, accordiug to the ancient Verſes,

Bis-ſextum ſextæ martis tenuere calendæ.
Poſteriore die celebrantur Feſta Mathiæ.

Aſtr

Astrological Elections of Times, briefly, yet fully and safely directing the right Administration of Physick and Phlebotomy.

For the Complexions, let Blood the
Phelgmatick, the Moon being in ♈ or ♓.
Melancholick, the Moon being in ♎ or ♒.
Cholerick, the Moon being in ♋ or ♐
Sanguine, the Moon being in ♉ ♍ or ♑.

Times of the year.
The *Spring* good, *Harvest* indifferent.

Time of the day.
Morning after Sun-rising, Fasting: afternoon, after perfect digestion, the Air temperate, the Wind not *South*.

Not good to Bleed.
At the *Change* of the *Moon*, nor two days before nor after: the *Conjunction*, *Opposition* or *Quartile* of *Saturn* or *Mars* forbiddeth the opening of a Vein, for 12 hours before, and 10 hours after: the *Conjunction* of the Moon with the *Dragons Head* or *Tail*, and the *Conjunction*, *Opposition* or *Quartile* of the Moon to *Satnrn* or *Mars*, forbids to bleed a day before or after, and *Venus* combust of the *Sun* is no way good.

Good to Let Bloud.
The Moon in *Conjunction*, *Sextile*, *Trine* of *Venus* or *Jupiter*, or within their Rays, or the *Sun* in *Trine* or *Sextile*, with *Jupiter* or *Venus*. or *Jupiter* and *Venus* beholding each other friendly, that is, by *Sextile* or *Trine*, or if in *Conjunction*. So likewise when *Saturn* or *Mars* are in *Sextile* or *Trine* with the Moon, 'tis not hurtful, if *Mercury* be fortunate, and not afflicted his

his Aſpects are good, but hurtfnl, if the contrary, the Moon, void of courſe, forbids not letting of Bloud, but after Bleeding ſleep not preſently, ſtir not violently, uſe not Venery, feed them warily. Notwithſtanding for the *Phrenſie*, the *Peſtilence*, the *Squinſie*, the *Pleuriſie*, the *Apoplexy*, and continual Head-ach, growing of *Bloud* and *Choler*, a hot burning *Feavour*, or any other extream paiu, in this caſe ſtay not for an elected time, but uſe all convenient ſpeed that may be.
